

João Vitor Ventura

Fullstack .NET Developer | ASP.NET Core | Azure | SQL Server | Blazor | React

Florianopolis, Brazil • ventura.py3@gmail.com • +55 (48) 99920-9252 • [LinkedIn](#) • [GitHub](#) • [Upwork](#) • [jventura.dev](#)

Experiences

Vorsprung Suspensions (E-commerce & ERP Platform) Freelance .NET Developer

Nov 2025 – Jul 2026: Full time
Jul 2026 – Present: On-demand low-hour support,
freeing capacity for new long-term engagement

- Design and maintain **ASP.NET Core REST APIs** and a **Blazor Server (MudBlazor)** frontend for a live e-commerce and **ERP** platform, working through a prioritized backlog of features and production issues.
- Diagnosed and fixed a critical data-integrity bug causing cross-platform record deletion between two integrated systems (**Shopify** and **Odoo**), resolving it with a new source-tracking property and an **Entity Framework Core** migration to backfill existing data.
- Led a security review across the platform's public **API controllers**, adding **rate limiting** and closing an authorization gap on an exposed endpoint.
- Built an **Odoo** integration module that automatically computes and injects trade-agreement text into a shipping carrier's (UPS) invoice generation through their **REST API**.
- Write unit and integration tests with **xUnit**, **NSubstitute**, and **FluentAssertions**, testing against a real **SQL Server** database instead of an in-memory provider.
- Own the end-to-end deployment process on **Windows Server** with **IIS**.
- Use **Claude Code** daily as part of the development workflow, for debugging, planning changes, and navigating the codebase.

Senac Santa Catarina Programming Professor

Palhoça, Santa Catarina
Mar 2024 – Mar 2025

- Designed practical, industry-aligned projects that gave students a real portfolio piece to show in job interviews, not just a graded assignment.
- Mentored students individually, with several going on to land their first internship or junior developer role.
- Designed course projects modeled on real industry patterns, **CRUD** apps, **REST APIs**, **deployment**, so students left with something they could demo, not a toy exercise.

Autonomous Independent Game Developer

Remote
Jun 2023 – Mar 2024

- Designed and programmed complete 2D games using **GameMaker Studio 2 (GML)**, delivering functional and integrated mechanics.
- Created and edited pixel art sprites and animations with **Aseprite**, ensuring a cohesive and stylish visual identity.
- Managed all project stages, from conception to final testing, developing independent project planning and execution skills.

Education

Senac Santa Catarina Systems Analysis and Development Feb 2023 – Jul 2025 Relevant Coursework:

Palhoça, Brazil
Bachelor's degree in technology

- Built 5+ full-stack projects across the program, including Lume (**.NET MAUI** + **ASP.NET Core** + **ML.NET**), Easy Check (**React** + **Spring Boot**, hosted on **AWS**), and Bookstore (**ASP.NET MVC** + **Entity Framework** + **MySQL**), applying clean code practices throughout.
- Structured coursework projects with **Clean Architecture**, **MVC**, and **Vertical Slice Architecture** to keep business logic decoupled from frameworks and easy to test.

- Deployed projects to **Azure** and **AWS** for demos and testing, including hosting a **MySQL** database on **Azure** for Lume and a full stack app on **AWS** for Easy Check.
- Designed **relational** and **NoSQL** schemas (**SQL Server**, **MySQL**, **MongoDB**) with indexing suited to each project's query patterns.
- Used **Git/GitHub** with branch-based workflows, pull requests, and **Conventional Commits** across every project, simulating a real team environment.

Leadership & Activities

Lume

Palhoça, Brazil

Tech Lead and Developer

Feb 2025 – Jul 2025

- Led the development of the Lume movie recommendation system, featuring a cross-platform frontend in **.NET MAUI** and a **RESTful** backend in **ASP.NET Core**.
- Developed a personalized recommendation engine using **ML.NET** and **K-Means clustering**, providing movie suggestions based on user profiles, genres, and keywords.
- Implemented a relational **MySQL** database following the MVC architecture, ensuring modular, maintainable, and scalable code.
- Managed deployment on **Azure (Azure Database for MySQL)**, ensuring high availability and application security.
- Collected and processed user preference data through questionnaires, improving recommendation accuracy and user engagement.
- Served as tech lead, coordinating development workflows, code reviews, and best practices, ensuring timely project delivery.

Equitable Mobility – Academic Article

Palhoça, Brazil

Author / Researcher

Feb 2023 – Apr 2024

- Led the research and writing of a published article in the Rease journal, proposing a real-time bus tracking solution for rural areas and presenting a case study of a rural municipality to promote equitable public transportation access.
- Mapped technical requirements through use case and activity diagrams, investigating **GTFS**, **GPRS**, and **GSM** to design a no-cost way for local companies to publish their routes on Google Maps.
- Coordinated the full extension project end to end, from data analysis and research to the final publication.

Skills & Interests

Technical: ASP.NET Core, Blazor, React, MVC, Vertical Slice Architecture, Git/GitHub, SQL Server, MySQL, MongoDB, Azure, AWS, Clean Architecture, Performance Optimization, Cloud Deployment, Version Control, API Integration, Entity Framework Core, xUnit, NSubstitute, FluentAssertions, ASP.NET Core Identity, Odoo/ERP Integration, Claude Code / AI-assisted development.

Language: Portuguese (native), English (advanced).

Interests: Web development, Cloud Computing, AI, Digital Games, Study of new technologies, Collaboration on software projects.
